

Pruning shears made of CARBON FIBER

ALTUNA launches a new range of shears
made of **ULTRA-LIGHT CARBON FIBER**

LIGHT WEIGHT - STRENGTH - FORCE - LESS EFFORT

LIGHT-WEIGHT: By using light weight fiber we have created ultralight professional tools as part of our carbon fiber product line.

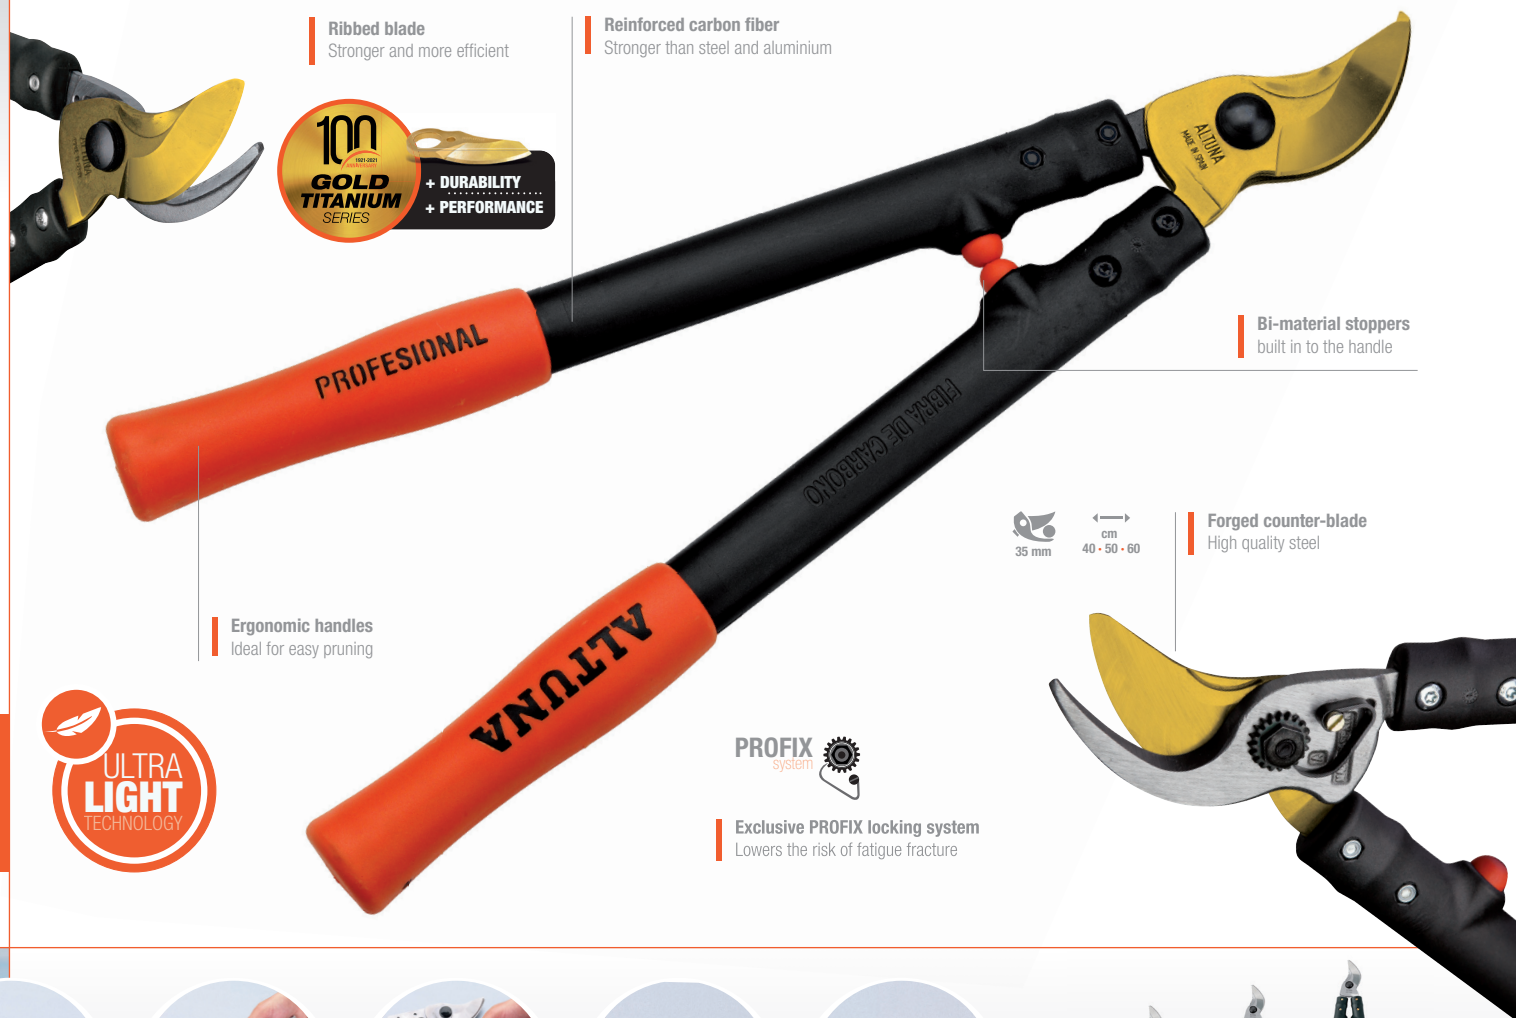

STRENGTH: Carbon fiber is an ultra-strong material that is 20% stronger than aluminium and steel.

FORCE: Thanks to the balanced design of the shear and its new re-designed head with an easy to insert tab, maximum force is applied to the cutting blade.

LESS EFFORT: A sliding system minimizes the effort required by 30% for a more comfortable and simpler cutting.

This light-weight and high strength material is used in the aerospace industry as well as in competitive sports.

Exclusive PROFIX locking system
Lowers the risk of fatigue fracture

Interchangeable blades and counter-blades
Possibility of exchanging the blades to incorporate two tools in one unit.

Curved blade
Ideal for pruning larger diameters.

Straight blade
Ideal for pruning vine arbours thanks to its greater manoeuvrability
